

JOB POSTING

Senior Exploration Geologist

Location	Japan
Job Type	Full Time
Experience	BSc Geology, 10+ years of experience
Posting Date	
Closing Date	January 15, 2025

We are excited to announce that **Japan Gold Corp.** is seeking a **Senior Exploration Geologist** to join its discovery team.

Japan Gold is a Canadian publicly traded company focused on the exploration for high-grade gold deposits in Japan. The Company holds a large portfolio of tenements which cover areas with known gold occurrences, a history of mining and are prospective for high-grade epithermal gold mineralization. This role provides a fantastic opportunity to join a small dynamic exploration team and explore some of the world's best epithermal districts, within the culturally rich Japan.

Senior Exploration Geologist Key Responsibilities

- Discovery of high-grade underground gold deposits
- Generate and manage exploration targets ranging from early-stage targets through to drill targets
- Conduct field programs to identify targets – mapping, geochemical and geophysical surveys and data analysis
- Develop and maintain 3D models from regional to project scale, built upon geological, structural, alteration, geophysical and geochemical data
- Design and execute drilling programs to test generated targets
- Foster best practices in exploration, data management and promote continuous improvement
- Ensure exploration programs are executed efficiently within budget and aligned within the companies HSE practices
- Report results in a timely manner to management, business partners and regulators

Requirements

- +10 years' experience in gold exploration
- Proven track record in target generation, experience of working within a discovery team would be advantageous
- Good understanding of low sulphidation epithermal systems
- Awareness of mineral systems
- Good field mapping skills
- Demonstrated ability to plan and execute field programs with minimal direction

JOB POSTING

- Experience in the planning and execution of drilling programs
- Proficient in integrating geology, structural, alteration, geophysical, geochemical and drilling data to build robust 3D models
- Dynamic, high energy, self-motivated and ability to make independent decisions
- Proficient in geology software – Leapfrog, ArcGIS, Iogas

Terms of Employment

This is ideally a Japan-based opportunity and reports directly to the President of Discovery. Desired candidate will be willing to work flexible hours. Applicants must be comfortable working on all kinds of weather and should be physically fit.

Remuneration

Compensation is commensurate with experience. Please apply with you Curriculum Vitae and expected compensation. A comprehensive benefits package will be offered, after a probationary period.

Contact

We appreciate all qualified applications: however, only suitable candidates will be contacted. Please direct all applications by email to info@japangold.com
