

Vancouver, British Columbia--(Newsfile Corp. - September 9, 2019) - **Japan Gold Corp. (TSXV: JG) ("Japan Gold" or the "Company")** is pleased to announce a second round of project acquisitions with the addition of five new gold Projects in the prospective *Southern* and *Middle Kyushu Epithermal Gold Provinces*. The projects cover prospective ground along strike of, or adjacent to, significant current and past producing gold mines including the Hishikari, Kushikino, Yamagano, Okuchi and Bajo mines. The new projects comprise 21,058 hectares collectively. The Japanese Ministry of Economy, Trade and Industry ("METI") has notified acceptance of the new applications giving Japan Gold priority over these areas and authorization to commence surface exploration. With the addition of these new projects, the Company's portfolio now includes 24 separate gold projects within the major epithermal gold provinces of Japan (Figure 1).

Highlights

- Five new low sulphidation epithermal gold Project acquisitions
- Portfolio expanded to 24 Projects
- Dominant position in the Southern Kyushu Epithermal Gold Province
- Three Projects adjacent to the Sumitomo Metal Mining, Hishikari Mine property

John Proust, Chairman & CEO commented "The acquisition of this coherent ground package in such a prospective address is a remarkable accomplishment. These new projects continue to provide outstanding exploration opportunities within the portfolio and the potential to create significant value for Japan Gold going forward."

The Southern Kyushu Epithermal Gold Province

In excess of 11 million ounces of gold have been produced from low-sulphidation epithermal deposits within the province, notable producers include: the Hishikari mine with 7.6 million ounces produced to date at average grades of 30-40 g/t Au¹; Kushikino mine, 1.8 million ounces at 6.7 g/t Au; Yamagano mine, 910,000 ounces at 17.4 g/t Au; and the Okuchi mine with 714,000 ounces at 13.6 g/t Au^{2,3}. The Company now holds a dominant position covering most of the highly prospective geology immediately along strike and adjacent to historic and currently producing mines in the province.

The three new projects within the Southern Kyushu Epithermal Gold Province include Isa, Gumyo and Kurino and comprise an additional 14,742 hectares (Figures 2 and 3). These projects cover prospective Pliocene and Pleistocene geological sequences adjacent to and along strike of the Hishikari, Yamagano and Okuchi gold mines, refer to

Figures 2 and 3 for project localities. Refer also to recent Company news releases dated 29 August and 30 July, 2019 for information on other new project acquisitions in the province.

Middle Kyushu Epithermal Gold province

In excess of 1.7 million ounces of gold have been produced historically from epithermal gold mines in the Middle Kyushu Province. The two newly acquired projects within the Middle Kyushu Epithermal Province are the Bajo and Usa projects and cover extensions to the Bajo gold mine and a series of historic gold workings in the Usa area for a combined total of 6,315 hectares (Figure 2).

Drill Result Disclosure

In conjunction with the aggressive project generation activities and multiple drilling operations, Japan Gold has reviewed its policy for drill result disclosure and determined that it is in the best interest of the Company to release results on the two current drill programs at the end of each phase of drilling when final assay results, ICP analysis and a thorough understanding of the program phase has been completed. This timing is consistent with better practices and allows the release of reliable and insightful information.

About Japan Gold Corp.

Japan Gold Corp. is a Canadian mineral exploration company focused solely on gold and copper-gold exploration across the three largest islands of Japan: Hokkaido, Honshu and Kyushu. The Company holds a portfolio of 24 Gold Projects which cover areas with known gold occurrences, a history of mining and are prospective for high-grade epithermal gold mineralization. Japan Gold's leadership team has decades of resource industry and business experience, and the Company has recruited geologists and technical advisors with experience exploring and operating in Japan. More information is available at www.japangold.com or by email at info@japangold.com.
